## AKNOWLEDGEMENT

I would like to thank the German Academic Exchange Service (DAAD), and German Jordanian University and Trier University of Applied Sciences, for giving me the chance to participate in the Train the Trainer program. I really appreciate the committee of Train the Trainer program 2015 for their help and cooperation.

## THE TRAINING

- The first week in Trier University of Applied Sciences was in the international office where Mr. Lex Director of the International Office, generously helped me to adapt and stable. He took me into several knowledgeable tours inside the University, where we visited the workshops that are used by the students to design different parts, especially car parts, also I had the chance to see the new 3D printers used by architecture and design students.

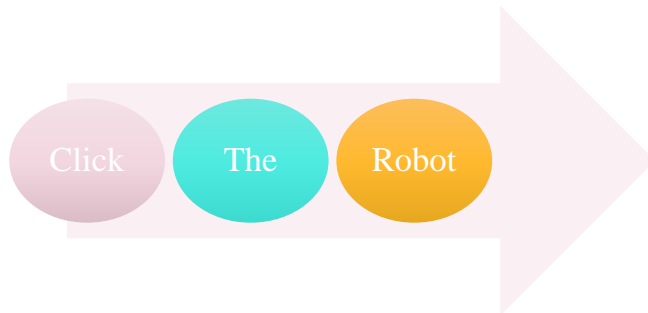

*Figure 4: the workshop*

*Figure 5: Robotics Lab*

- The next 3 weeks I spent in the Computer center where I was involved in many meetings and presentations with computer center members and the computer science department staff.
- The Computer Center presented several presentation, demonstrated a service called „Remote Execution Server“, and the design and information flow of the RIS (Resource information System).

- Computer science department demonstrated us the „Automated Software Evaluation Tool“ which was developed by department students / staff, , this tool enabled the enrolled students in the programming courses to test their codes online which is a good software checking tool
- We made a visit to the (Robotics Laboratory), where we were introduced to the software they are using to develop student assignments, and we demonstrated several programs on the different robotics in the lab.

## PERSONAL EXPERIENCE

The working environment in Trier University of Applied Sciences is very professional, during my stay I enjoyed the training the way they work is very organized, I appreciate how they shared a lot of their system info, and the time they spent with us to deliver and answer our questions, many thanks to Dr. Karl and his great team.

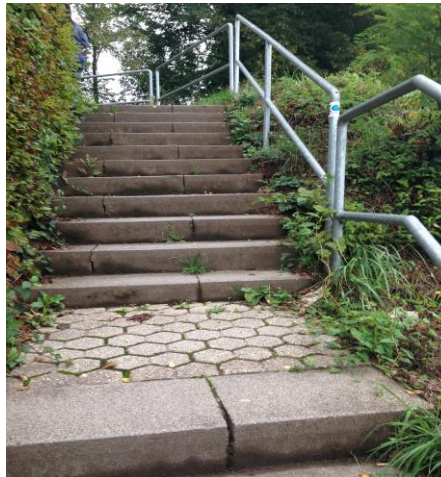

This experience is very rich and different, new environment, different county, and nice people, I discovered a lot and learned a lot, this training entrenched me on the personal level too.

## SUGGESTIONS

The training period was 4 weeks, the first week we were stilling down getting to know the place and the people, I think it would be better if the duration was longer.
