

Train the Trainer Report

I would like to express my deepest gratitude to the International Office and to my supervisor for giving me the opportunity in discovering a new city, culture, people, experience, and beneficial knowledge.

Train the Trainer program is an opportunity to gain knowledge and experience from the perspective of an advanced and distinguished country as Germany. Moreover, the program allowed me to become a trainee at Trier University of Applied Sciences, one of German Jordanian University's associates.

When I applied to the program, my biggest concern as mentioned in my motivation letter and based on the nature of my work is to study the technological infrastructure available to academic staff, administrative staff, and students.

I have achieved my designated goal completely during my training at the Computer Center at Trier University of Applied Sciences, supported by teamwork under the supervision of Dr. Karl Molter, the Head of the Computer Center. The team fully supported me and informed me of the most important details in order to achieve my goal.

I focused on working with **Raspberry PI 2** to implement an information screen for students that could gather information from different sources and display it in one good web layout.

The wonderful things I liked the most were the beautiful landscapes, infrastructure of the transportation system, their understanding and generosity, the cultural awareness and the environmental safety, and the value of the services given to the people.

On the day I returned to Jordan, people kept on asking me nonstop about my training experience in Germany and the German culture, and my answer is always the same, that the Germans who I have dealt with believe that one's freedom ends when it affects the freedom of others, and that is a rule I respect and keep in mind.

The experience and knowledge I have gained during my training will dwell with me and aid me in implementing at the German Jordanian University. I pray that I have reflected a part of my culture, environment, education, and country in a positive manner.

And last but not least, I cannot help but say that the four weeks I have spent in Germany in the program have been special, and I won't hesitate to recommend this program continuously to others.

As known as the Prophet Mohammad's teachings, Peace Be Upon Him, that **"those who do not show gratitude to people, do not show gratitude to God."** (من لا يشكر الناس لا يشكر الله). Hence, I thank you for giving me this chance to improve myself and gain new experiences.
