

GJU Energy Engineering Students actively participated in representing Almaden Europe GmbH at „Intersolar Europe 2018“, the world’s leading specialized fair for renewable energies.

GJU students Jihad Zidan and Almontaser Alzyod, both studying Energy Engineering, are currently doing their internship semester at Almaden Europe GmbH, a Germany-based producer for photovoltaic and self-sufficient energy systems.

Their employer is highly satisfied with the performance of both of them. Not only do they accomplish valuable contribution in the daily business, but they also were of great help during the world’s leading specialized fair for renewable energy „Intersolar Europe 2018“ in Munich, Germany. They were able to represent the company really well towards potential customers and actively helped in answering their questions in a very professional manner.

Furthermore, one of the students will be writing his graduation project in cooperation with the company.

Almaden Europe GmbH is looking forward to a continuous successful contribution with such motivated and talented GJU students.
