

Regulations for GP:

The student must ensure that all the following rules are honored in order to count the project at GJU, otherwise the student will fail the graduation project courses registered at GJU, and the work performed during the project semester will be considered an extension of the industrial training.

1. A project proposal must be submitted to the advisor at the GJU three weeks before the “Add & Drop Period” of the semester, in which the student plans to perform the project.
2. The student has to ensure he/she stays registered at the host university during this third (project) semester, and make sure his/her residential status in Germany is legal. Not all GJU partner universities will approve such a request.
3. The student must complete 20 (twenty) weeks of regular industrial training (Praktikum) before starting the graduation project.
4. The graduation project duration must span a minimum of 16 (sixteen) weeks and cannot overlap with the training period.
5. Any course work completed during the graduation project period is not eligible for transfer credit at the GJU.
6. The student must be physically working full-time on the graduation project at the company in Germany the whole 16 weeks.
7. The project cannot be a continuation of the work performed during the training. There must be a clear distinction between the training work and the proposed project content.
8. The project cannot be an industry secret and must be documented properly following guidelines at GJU.
9. The project must have a project advisor at the company in Germany and at the GJU in Jordan.
10. The project documentation must be in the English language, signed and approved by the German advisor and stamped by the company.
11. As part of the defense requirements, a handout document must be provided to the examiners, that contains the bi-weekly status updates written by the student to his/her advisor at GJU.
12. The project must be successfully defended at GJU to receive a grade for 6 credit hours of “Graduation Project I” and “Graduation Project II”.
