

# German-Jordanian University

## School of Electrical Engineering and Information Technology

### Bachelor of Science in *Computer Engineering*

#### Study Plan

Version: 1.22  
April, 2021

# 1. Introduction

Emerging global knowledge economies have created a demand for highly skilled Information and Communication Technology (ICT) workforce in all industries. As a result, ICT labor markets have become highly competitive. With the tremendous wealth recently generated in the Gulf States and subsequent industrial booms, such markets in the region became highly attractive to many Jordanian ICT workers. A large number of experienced ICT professionals leave the country every year. Faced with such conditions, the demand for a highly skilled ICT workforce has increased tremendously. As the result of workforce migration, the ICT workforce in Jordan comprise of graduates who are young and possess little experiences and knowledge. Therefore, the necessity to educate and develop a qualified workforce to support Jordan economy and compete on an international level is paramount.

In Jordan, current trends indicate that the skill set composition of the ICT workforce is changing. With a growing pool of 19,000 ICT related labor force and steadily inflowing 6,000 ICT graduates yearly, Jordan has a potential to become a regional leader in the ICT sector<sup>1</sup>. The available evidence confirms that the current quality of ICT education cannot meet the labor market requirements; neither can it cope with the evolution of ICT technologies. In spite of the growing importance of ICT workforce, very little efforts have been made to implement quality and relevance ICT education in Jordan. The need for better quality and relevance of workforce skills has been identified by the Information Technology Association – Jordan as one of the challenges facing the ICT sector and affecting its growth, development and effectiveness.

To help meet these emerging demands on ICT education and address market needs, the School of Electrical Engineering and Information Technology envisioned since its inception in 2005 a unique approach to expand on the long experience of the German model of applied science and contribute to building a premier quality and relevant, industry oriented ICT education in Jordan. The goals are high level quality in education and research, international co-operation, rich interaction and partnerships with enterprises, and focus on relevant academic programs.

The B.Sc. in Computer Engineering program at GJU provides a unique educational environment. It offers small classes, outstanding facilities, and an extremely supportive staff. It also offers peer tutoring and technical support sessions that would help students move forward on a road towards success. Our faculty includes some of the disguised professors and researchers that are specialized in various topics the computer engineering field.

The projected unrivalled quality of education in the Department of Computer Engineering at GJU not only contributes to the advancement and progress in the ICT sector in Jordan, but also began to serve as an icon within the country. The B.Sc. in Computer Engineering program has been able to train professionals and experts who began to contribute to the Jordanian economy.

## 2. Program Objectives

The mission of the Department of Computer Engineering is to offer a CE undergraduate program that augments the liberal education expected of all German Jordanian University undergraduates and imparts a basic understanding of computer engineering built on a foundation of physical science, mathematics, computing, and technology.

Graduates of the undergraduate program should possess knowledge of computer engineering fundamentals and one specialty area. They are expected to have the basic experimental, design, and communication skills to be prepared for continued study at the graduate level or entry level positions that require basic knowledge of computer engineering, science, and technology.

The educational objectives for the Department of Computer Engineering are:

1. **Technical Knowledge:** Provide a basic knowledge of computer engineering principles along with the required supporting knowledge of mathematics, science, computing, and engineering fundamentals. The program includes depth in one specialty area, currently including Software Systems, Embedded Systems, Computer Networks, and Operating Systems.
2. **Laboratory and Design Skills:** Develop the basic skills needed to perform and design experimental projects. Develop the ability to formulate problems and projects and to plan a process for solutions taking advantage of diverse technical knowledge and skills.
3. **Communications Skills:** Develop the ability to organize and present information, and to write and speak effective English.
4. **Preparation for Further Study:** Provide sufficient breadth and depth for successful subsequent graduate study, post-graduate study, or lifelong learning programs.
5. **Preparation for the Profession:** Provide an appreciation for the broad spectrum of issues arising in professional practice, including teamwork, leadership, safety, ethics, service, economics, and professional organizations.

### 3. Learning Outcomes

Students completing the program earn a Bachelor of Science in Computer Engineering. The program has been designed so that graduates will have:

- An ability to apply knowledge of mathematics, science, and engineering
- An ability to design and conduct experiments, as well as to analyze and interpret data
- An ability to design a system, component, or process to meet desired needs
- An ability to function on multi-disciplinary teams
- An ability to identify, formulate, and solve engineering problems
- An understanding of professional and ethical responsibility
- An ability to communicate effectively
- The broad education necessary to understand the impact of engineering solutions in a global and societal context
- A recognition of the need for, and an ability to engage in, life-long learning
- A knowledge of contemporary issues
- An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice
- Background for admission to engineering or other professional graduate programs

## 4. Degree Requirements

### Framework for B.Sc. Degree (Semester Credits)

The Bachelor of Science degree in Computer Engineering requires successful completion of the following course requirements.

| Classification          | Credit Hours |           |            |
|-------------------------|--------------|-----------|------------|
|                         | Compulsory   | Elective  | Total      |
| University Requirements | 21           | 6         | 27         |
| School Requirements     | 26           | 0         | 26         |
| Program Requirements:   | 111          | 12        | 123        |
| <b>Total =</b>          | <b>158</b>   | <b>18</b> | <b>176</b> |

### 1. University Requirements: ( 27 Credit Hours)

#### 1.1. Compulsory : (21 Credit Hours)

| Course No.   | Course Title                    | Cr. Hr.   | Lecture /week | Lab./ week | Prerequisite       |
|--------------|---------------------------------|-----------|---------------|------------|--------------------|
| ARB 99*      | Arabic 99                       | 0         | 0             | 3          | -                  |

**\* The CE 391 field training course should be registered after completing at least 115 credit hours of the study plan. The minimum number of training hours is 280 hours and the student should be performed in an organization that is highly related to the computer engineering field. The training period should be connected without any gaps.**

**\*\* The CE 592 Senior project I course should be registered after completing the CE 391 course.**

### 3.2. Elective Courses (12 Credit Hours):

Students have to choose 12 credit hours from the following courses:

| Course No. | Course Title   | Cr. Hr. | Lecture /week | Lab./ week | Prerequisite         |
|------------|--|---------|---------------|------------|----------------------|
| ME 312     | Microcontrollers and IoT                                       | 4       | 3             | 0          | CE212                |
| ME 313     | Microcontrollers and IoT Lab                                   | 0       | 0             | 3          | Co-requisite: ME 312 |
| CE 353     | Distributed Systems  | 3       | 3             | 0          | CE 352               |
| CE 461     | Image Processing   | 3       | 3             | 0          | CE 331               |
| CE 471     | Software Design and Architecture                               | 3       | 3             | 0          | CS 342               |
| CE 473     | Software Requirements Analysis                                 | 3       | 3             | 0          | CS 342               |
| CE 474     | Software Quality Assurance and Testing                         | 3       | 3             | 0          | CS 342               |
| CE 501     | Advanced Computer Architecture                                 | 3       | 3             | 0          | CE 201               |

|---------|---------------------------|---|---|---|--------------------|
| CS 419  | Compiler Construction     | 3 | 3 | 0 | CS 222,<br>CS 223  |
| CS 477  | Mobile Computing          | 3 | 3 | 0 | CS 214,<br>CS 2410 |
| CE 520  | Cognitive robotics        | 3 | 3 | 0 | CS 214             |
| ECE 461 | Digital Signal Processing | 3 | 3 | 0 | CE 311             |
| CE 530  | Applications of Robotics  | 3 | 3 | 0 | ECE 317            |

The table above can be extended by mutual agreement.

Students may also select a maximum of six credits of 300 level and above courses from other departments in the School of Electrical Engineering and Information Technology in order to fulfill the elective requirements, including the courses offered at the computer engineering master program.

## Study Plan Guide for the Bachelor Degree in Computer Engineering

| First Year  |                                 |           |                        |
|-------------|---------------------------------|-----------|------------------------|
| First Term  |                                 |           |                        |
| Course No.  | Course Title                    | Cr. hr.   | Prerequisite           |

## Generating the Course Code

The numbering system is structured as follows (from left to right):

1. Alpha digits: CE: Computer Engineering
2. Level digit: 1, 2, 3, 4, or 5 for course level year one to five
3. Subject area digits; One digit: serial number within a given area

## **Description of Courses Taken from the Computer Engineering Department**

### **CE 201: Computer Architecture and Organization**

Basic computer organization, central processing unit, micro-program control and control unit, arithmetic processor, memory units, bus structures, interrupt structures. Taxonomies of computer architectures; addressing methods, programs control, processing units, I-O organization, arithmetic, main-memory organization, peripherals, microprocessor families, RISC architectures and multiprocessors. Von Neumann; Baseline of processor architecture; Memory organization; Parallel computing;

Prerequisites: CE 212, CE 2120

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CE 212: Digital Systems**

Fundamentals of digital electronics, Binary number system; Boolean algebra, logic operations, algebra and gates, digital circuits analysis, gate-level and block level design of digital circuits, adders, subtractors, comparators, multiplexers, decoders, analysis, design and applications of sequential circuits: flip-flops, registers, counter, and their design procedures, RAM and ROM memory elements.

Prerequisites: -

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CE 2120: Digital Systems Lab**

The course also includes 3-hours lab session every week to enhance hands-on experience on topics that are theoretically covered in the CE 212 course, including basic logic gate experiments, combinational logic circuits experiments, and sequential logic circuits experiments. The experiments on all topics vary from functional troubleshooting to gate and block level design implementation.

Co-requisite: CE 212

Credit Hours: 1, Lecture Hours: 0, Lab Hours: 48

### **CE 331: Signals and Systems**

Concepts and mathematical tools in continuous and discrete-time signal processing and linear systems analysis with examples from digital signal processing, communications, and control. Discrete-time signal models. Continuous-discrete-continuous signal conversion. Discrete-time impulse and step response. Frequency domain representations: Fourier series and transforms. Connection between continuous and discrete time frequency representations. Discrete Fourier transform (DFT) and fast Fourier transform (FFT). Digital filter and signal processing examples. Discrete-time and hybrid linear systems. Stability and causality. Z transforms and their connection to Laplace transforms. Frequency response of discrete-time systems.

Prerequisites: MATH 203

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CE 342: Microprocessor and Microcomputer Systems**

Introduction to theoretical concepts of 8-bit and 16-bit microprocessors including microprocessor architecture, memory organization, instruction set, input/output organization, and interrupts. Design of microcomputer systems, address maps, system bus, memory maps, peripheral I/O, memory-mapped I/O, interrupt-driven I/O, interface devices, and general-purpose programmable peripheral devices.

Prerequisites: CE 212, CE 2120

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CE 3420: Microprocessor and Microcomputer Systems Lab**

The course also includes 3-hours lab session every week to enhance hands-on experience on topics that are theoretically covered in the CE 342 course.

Co-requisite: CE 342

Credit Hours: 1, Lecture Hours: 0, Lab Hours: 48

### **CE 357: Operating Systems**

Operating system structures, process concept, hierarchy of processes, semaphores, inter-process communication, CPU scheduling, deadlocks, memory management, virtual memory, secondary storage management, file systems, I/O systems. 3-hours lab covers hands-on-experience on a study development of a sample operating system and alternative designs of operating systems: programming language development, advanced commands, shell programming, and design principles. The focus of the sample operating system will be on the Linux Open Source to equip students with the right skills to work with open sources software.

Prerequisites: CE 201

Credit Hours: 4, Lecture Hours: 48, Lab Hours: 0

### **CE 3570: Operating Systems Lab**

The course also includes 3-hours lab session every week to enhance hands-on experience on topics that are theoretically covered in the CE 357 course.

Co-requisite: CE 357

Credit Hours: 1, Lecture Hours: 0, Lab Hours: 48

### **CE 352: Computer Networks**

Study of computer network architectures, protocols, and interfaces. The OSI reference model and Internet architecture. Network models: LAN and WAN; Networking techniques such as multiple access, packet/cell switching, internetworking, end-to-end protocols, and congestion control; IP, UDP and TCP protocols; Internet application protocols and applications: http; DNS; Web services; email protocols: SMTP, POP3; Network security. The students are expected to implement a project in the field of computer networks and to use open source network simulators such as NS2.

Prerequisites: CS 116, CE 201

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CE 3561: Computer Networks Lab**

Gain hands on experience on computer network protocols and interfaces, OSI reference model, and Internet protocols.

Prerequisites: CE 357, CE 3570

Credit Hours: 3, Lecture Hours:0, Lab Hours: 48

### **CE 353: Distributed Systems**

Use and complexity of distributed systems; general integration problems application protocols; technical infrastructures for distributed programming; distribution strategies, i.e. load balancing, replication, fault tolerant systems Architectures and topologies; Distribution models; Reasons for distributed systems; Communication in distributed systems: Review of the OSI reference model; Communication mechanism; Middleware; Server and client programming; Client-server paradigm; Concurrent server programming; Asynchronous clients; Technologies: IP sockets; Remote invocation: RPC paradigm: C RPCs and Java RMI; Distribution strategies; Load balancing ; Fault tolerance and replication.

Prerequisites: CE 352

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CE 354: Computer Security**

Security of networked computer systems; secure network configuration and user management; handling of attacks; Tools for secure network management; System management; System administration; System programming for security; Security: local attacks; network attacks; Firewalls; Security of web servers, ftp servers and mail servers; Virtual private networks, Cryptography, encryption and decryption techniques, primary key and digital certificate principles, Public Key Cryptography and the RSA Algorithm.

Prerequisites: CE 352

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CE 355: Data Communication**

Fundamentals of Data Communications. Transmission Media, Data Encoding, Transmission Techniques, Protocols, Switching Networks, Broadcast Networks, Local Area Networks (LANs) and Wide Area Networks (WANs). Transmissions Technique and Cables. Troubleshooting Methods. Communication Interfaces. Network Security. Error Detection and Correction Methods. Modems Modulation Techniques for Digital Data Transmission, Data Link Protocols. High-Speed Packet Switching and Message Switching. OSI Reference Model. TCP/IP Protocols. Routing and Flow Control. Fundamentals of Frame Relay, ATM, X.25. Application Services, HTTP, Cryptography, MIME, E-mail. Telecommunication Services, ISDN, xDSL. New Technologies, IP Telephony, H323, WAP.

Prerequisites: CE 331

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CE 391: Field Training**

Students must complete 160 hours of field training in approved industries in Jordan by the end of their third academic year.

Prerequisites: Department Consent

Credit Hours: 0, Lecture Hours: 0, Practical Hours: 160

### **CE 441: Embedded System Design**

Embedded system concepts, hardware architecture, design and debugging, embedded processor selection, software development methodologies, real-time Linux, synchronization mechanisms, interrupt latency, application programming interface, interrupt service routine, application design considerations.

Prerequisites: CE 201

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CE 444: Microcomputer Interface and Peripheral Devices**

This course covers various topics relative to microprocessor/microcontroller interfacing in addition to peripheral devices and their properties. Topics include: Processor Architecture Overview, Memory Models, GPIO interfacing, Interrupt handling, ADCs and DACs, Timers and PWM, Serial Interface Controllers, External sensor interfacing, Driving outputs. The course also has a practical part which uses Microcontrollers to conduct experiments based on assembly and the C language that interface with different input and output peripherals.

Prerequisites: CE 342, CE 3420

Credit Hours: 4, Lecture Hours: 48, Lab Hours: 0

**CE 4440: Microcomputer Interface and Peripheral Devices Lab**

The course also includes 3-hours lab session every week to apply microcontroller interfacing concepts hands-on on a hardware development board. Also includes getting introduced to the necessary toolchain and development tools required for creating and deploying code on a microcontroller platform. Experiments include a variety of interfacing with inputs and outputs, developing mixed code applications in assembly and C, analyzing interrupt sequences, and learning how to debug code by stepping through instructions and reading/interpreting data in microcontroller memory.

Co-requisite: CE 443

Credit Hours: 1, Lecture Hours: 0, Lab Hours: 48

**CE 461: Image Processing**

This course covers image processing theory and techniques. Topics include: image models, image transformations, image enhancement, image restoration, image compression, image segmentation, and image recognition.

Prerequisites: CE 331, ECE 317

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CE 471: Software Design and Architecture**

In-depth software design concepts; design patterns, frameworks, and architectures; middleware architectures. Design of distributed systems using middleware. Component based design. Measurement theory and appropriate use of metrics in design. Design qualities such as performance, safety, security, reusability, reliability, etc. Measuring internal qualities and complexity of software. Evaluation and evolution of designs. Basics of software evolution, reengineering, and reverse engineering methodologies.

Prerequisites: CS 342

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CE 473: Software Requirements Analysis**

General principles and techniques for software design. BNF Domain engineering. Techniques for discovering and eliciting requirements. Languages and models for representing requirements. Analysis and validation techniques, including need, goal, and use case analysis. Requirements in the context of system engineering. Specifying and measuring external qualities: performance, reliability, availability, safety, security, etc. Specifying and analyzing requirements for various types of systems: embedded systems, consumer systems, web-based systems, business systems, systems for scientists and other engineers. Resolving feature interactions. Requirements documentation standards. Traceability. Human factors. Requirements in the context of agile processes. Requirements management and handling requirements changes.

Prerequisites: CS 342

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CE 474: Software Quality Assurance and Testing**

Quality assurance and verification; Need for a culture of quality. Avoidance of errors and other quality problems; Inspections and reviews; Testing, verification and validation techniques; Process assurance vs. Product assurance; Quality process standards; Product and process assurance. Problem analysis and reporting; Statistical approaches to quality control.

Prerequisites: CS 342

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CE 493: Field Training**

A training period of six month to be spent in the industry in Germany, under a follow up of academic faculty in Jordan and in Germany. Periodic reports and a final report need to be submitted for evaluation and an oral examination is required.

Prerequisites: Department Consent

Credit Hours: 9, Lecture Hours: 0, Practical Hours: 40 Hours/week

**CE 501: Advanced Computer Architecture**

This course focuses on advanced system-level architecture techniques for devices such as personal computers, servers, and embedded or portable systems. It covers topics such as cache hierarchies, memory systems, storage and IO systems, virtualization, clusters, fault-tolerance, and low-power design. It also covers the interactions between the hardware and software layers in such systems. The programming assignments provide an introduction to performance analysis and optimization techniques for small-scale and large-scale systems.

Prerequisites: CE 357, CE 3570

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CE 502: Parallel Architectures and Parallel Algorithms**

Parallelism in processors; multi-core processors; classification of parallel architectures; multiprocessor architectures; interconnections networks; Amdahl's law; abstract parallel machine models; templates for parallel algorithms; searching, merging, sorting; graph algorithms (traversing, spanning trees, connected components); numerical algorithms (matrix algorithms, linear equations) Data dependencies; shared memory computing (threads, OpenMP); message passing computing; parallelization strategies (embarrassingly parallel, partitioning, pipelined, synchronous); load balance.

Prerequisites: CE 201, CS 222, CS 223

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CE 521: Robotics**

Introduction to basics of modeling, design, planning, and control of robot systems. Topics include: robotics foundations in kinematics, dynamics, control, motion planning, trajectory generation, programming and design.

Prerequisites: CME 343

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CE 520: Cognitive Robotics**

This introductory course gives an overview of the cutting-edge world of Robot Operating System (ROS), an open source system for working with robots. ROS is used widely in research and is starting to be used commercially. This course will mainly focus on utilizing ROS in the field of robot perception such as the perception for manipulating objects, perception of people and other moving objects. Different open source tools beside ROS will be used such as the Open Source Computer Vision Library (Open CV), the Point Cloud Processing Library (PCL) to develop a vision and navigation frameworks for robots. In this course, students will be responsible of reading and summarizing a selection of published papers, in order to get the required skills and basics to do state-of-the-art, publishable work in mobile robotic manipulation.

Prerequisites: CS 214

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CE 551: Advanced Operating Systems**

The course covers advance topics: virtual memory management, synchronization and communication, file systems, protection and security, operating system extension techniques, fault tolerance, and the history and experience of systems programming.

Prerequisites: CE 357

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CE 552: Advanced Computer Networks**

High-speed local networks; metropolitan area networks; bridges; routers; gateways; TCP/IP; application services; IP addressing; IP forwarding, encapsulation, and fragmentation; Address Resolution (ARP& RARP); IP next generation (IPv6); Inter Control Message Protocol (ICMP). Routing Algorithms, MPLS networking technology, VPNs, Network applications and services, Multimedia over internet, Network performance, and Network design. A set of laboratory experiments will provide hands-on experience in related topics

Prerequisites: CE 352

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CE 477: Machine Learning**

This course focuses on statistical pattern recognition and machine learning techniques. The main topics of the course include: Bayesian decision theory, parametric density estimation (Maximum likelihood estimation (MLE) and non-parametric density estimation (Density Estimation, Parzen Window, K- Nearest Neighbor estimation, PNN, k-Nearest Neighbor classification rule), Bayesian parameter estimation, Hidden Markov models (HMM)), Linear Discriminant Analysis( Linear discriminant functions, generalized discriminant analysis, Support vector machines ), probabilistic graphical models, Multilayer Neural Networks ( Perceptron Model, Artificial Neural Networks ANN's, Feed-forward NN, Error Back-propagation Algorithm), deep learning, and feature reduction and selection. This course involves several programming assignments in which students will use Matlab and/or Python to build various machine learning and pattern classification models that can be used to solve real-world problems.

Prerequisites: ECE 315

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CE 592: Senior project I**

Theoretical investigation and practical implementation of a special project under the supervision of an academic faculty member, detailed report as well as an oral examination are required.

Prerequisites: Department Consent

Credit Hours: 1, Lecture Hours: 0, Lab Hours: 3

### **CE 594: Senior project II**

Theoretical investigation and practical implementation of a special project under the supervision of an academic faculty member, detailed report as well as an oral examination are required.

Prerequisites: CE 592

Credit Hours: 3, Lecture Hours: 0, Lab Hours: 9

### **CE 558: Special Topics in Computer Networks**

This course is offered to senior level students in computer engineering. It gives them exposure to special topics in computer networks. Topics may vary each time the course is offered. Details of the course will be advertised by the department at the time of offering.

Prerequisites:

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CE 559: Special Topics in Operating Systems**

This course is offered to senior level students in computer engineering. It gives them exposure to special topics in operating systems. Topics may vary each time the course is offered. Details of the course will be advertised by the department at the time of offering.

Prerequisites:

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CE 579: Special Topics in Software Engineering**

This course is offered to senior level students in computer engineering. It gives them exposure to special topics in software engineering. Topics may vary each time the course is offered. Details of the course will be advertised by the department at the time of offering.

Prerequisites:

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CS 482: Special Topics in Software Engineering**

This course is offered to senior level students in computer engineering. It gives them exposure to special topics in software engineering. Topics may vary each time the course is offered. Details of the course will be advertised by the department at the time of offering.

Prerequisites:

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CE 596: Special Topics in Intelligent Systems**

This course is offered to senior level students in computer engineering. It gives them exposure to special topics in artificial intelligent, machine learning and pattern recognition. Topics may vary each time the course is offered. Details of the course will be advertised by the department at the time of offering.

Prerequisites:

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CE 599: Special Topics in Computer Engineering**

This course is offered to senior level students in computer engineering. It gives them exposure to special topics in computer engineering. Topics may vary each time the course is offered. Details of the course will be advertised by the department at the time of offering.

Prerequisites:

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CE 452: Network Protocols**

Topics include the TCP/IP networking protocol architectures, layering, encapsulation, PDUs; sliding window algorithms, flow and error control, and the HDLC and PPP protocols; the OSI network layer organization, virtual circuits and datagrams, routing and congestion control algorithms, the X.25 and Frame Relay protocols and, internetworking, IPv4 and the evolving IPv6 internetworking protocols, and the RIP, OSPF, ES-IS, and IS-IS routing protocols, session layer dialog control and activity management, queuing, , packet scheduling, network security protocols; IPsec and VPNs, performance analysis, testing, correctness, SNMP, Wireless network protocols, Multi-Protocol Label Switching (MPLS), multimedia and real time network protocols.

Prerequisites: CE 352

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

**CE 512: Advanced Logic Design**

Basic semiconductor physics, Digital Systems families, design methodologies, Digital Systems circuits, programmable logic devices, Digital Systems implementation with CPLD and FPGA, Verilog/VHDL compilation for CPLDs and FPGAs, synthesis of Altera/Xilinx CPLD and FPGA, synchronous versus asynchronous design, clock skew and path delays, PCB layout, post routing issues, embedded RAM and design criteria.

Prerequisites: CE211, CE 2120, CE 357, and CE 3570

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

## **Description of Courses Taken from other Departments at GJU**

### **MILS 100: Military Sciences**

History of the Jordanian Arab Army. United Nations Peace Keeping Forces. Preparation of the nation for defense and liberation. History of the Hashemite Kingdom of Jordan and its development.

Prerequisites: - None

Credit Hours: 3, Lecture Hours: 48, Practical Hours: 0

### **ARB 100: Arabic**

Grammar and structure. Rectifying weakness in linguistic application; training in sound reading. Dictation; use of language in a manner free from grammatical and linguistic errors; accurate expression of intended meaning. Study and analysis of literary texts through the discussion of linguistic, grammatical and writing skills therein.

Prerequisites: None

Credit Hours: 3, Lecture Hours: 48, Practical Hours: 0

### **ENGL 098: English I (Elementary English)**

Students will focus on English at an elementary level concentrating on the receptive skills of reading and listening, and the productive skills of writing and speaking. These will include such things as independent clauses, verb tenses, model verbs, adverbs, short dialogues, reading simple material and answering short questions, writing short meaningful sentences, listening to short conversations.

Prerequisites: None

Credit Hours: 0, Lecture Hours: 48, Practical Hours: 0

### **ENGL 099: English II (Pre-Intermediate English)**

Students will focus on English at a pre-intermediate level concentrating on the receptive skills of reading and listening and the productive skills of writing and speaking. These will include such things as comparatives and superlatives, quantifiers, possessive adjectives and pronouns, vocabulary building, role play activities for speaking, reading comprehension and writing short descriptive paragraphs.

Prerequisites: ENGL 098

Credit Hours: 0, Lecture Hours: 48, Practical Hours: 0

### **ENGL 101: English III (Intermediate English)**

Students will focus on English at an intermediate level concentrating on the receptive skills of reading and listening and the productive skills of writing and speaking. These will include collocations, tense review, affirmative, negative statements, synonyms and antonyms, time clauses, conditionals, active and passive forms, reported speech, phrasal verbs, reading comprehension with detailed questions, vocabulary and writing developed descriptive and opinion essays.

Prerequisites: ENGL 099

Credit Hours: 1, Lecture Hours: 48, Practical Hours: 0

**ENGL 102: English IV (Upper-Intermediate English)**

Students will focus on English at an upper-intermediate level concentrating on the receptive skills of reading and listening and the productive skills of writing and speaking. Model verb review, silent letters and proper pronunciation, jobs and careers, requests and offers, more phrasal verbs with vocabulary building, relative clauses and relative pronouns, narrative tenses for writing exercises, wishes and regrets, reading and comprehending longer passages with direct and inference questions of medium difficulty, hypothesizing, and writing fully developed descriptive, argumentative and analytical essays of 350 words.

Prerequisites: ENGL 101

Credit Hours: 1, Lecture Hours: 48, Practical Hours: 0

**ENGL 201: English V (Advanced English I)**

Students will focus on English at an Advanced level. Students will analyze and produce 2 – 3 page essays with an emphasis on argumentation and persuasion working both independently and cooperatively to gather, evaluate, and synthesize necessary information. Class activities include interactive lectures, small group and class discussions, informal debates, peer feedback, individual presentations, focused listening exercises and focused viewing exercises as well as assorted reading, writing, and grammar assignments. There will be some poetry analysis together with reading and understanding a short story and a drama using basic literary terms and concepts.

Prerequisites: ENGL 102

Credit Hours: 2, Lecture Hours: 48, Practical Hours: 0

**ENGL 202: English VI (Advanced English II)**

Students will continue to focus on English at an Advanced level. Students will analyze and produce 4 – 5 page essays emphasizing argumentative, persuasive and discursive styles of writing, working both independently and cooperatively to gather, evaluate, and synthesize necessary information. Students will integrate the practice of critical thinking and reading into the writing process. Class activities include interactive lectures, small group and class discussions, informal debates, mini-conferences, peer feedback, individual presentations, focused listening exercises and focused viewing exercises as well as assorted reading, writing, and grammar assignments. There will be some poetry analysis together with reading and understanding a short story and a drama using stronger and more intensive literary terms and concepts than in 201.

Prerequisites: ENGL 201

Credit Hours: 2, Lecture Hours: 48, Practical Hours: 0

**GERL 101: German I**

Can understand and use familiar, everyday expressions and very simple sentences, which aim at the satisfaction of specific needs. Can introduce oneself, and others, and ask others questions to themselves - e.g. where they live, which people they know or what kind of things they have - and can give answers on questions of this kind. Can communicate on a basic level if those involved with him/her in a conversation speak slowly and clearly and are willing to help.

Prerequisites: -

Credit Hours: 3, Lecture Hours: 144, Practical Hours: 0

**GERL 102: German II**

Can understand sentences and frequently used expressions if those are connected with things of immediate meaning (e.g. information to the person and to the family, buying, work, closer environment). Can communicate in simple, routine situations, with the purpose of a simple and direct

exchange of information about familiar and common things. Can describe with simple means their own origin and training, direct environment and things that are in connection with direct needs.

Prerequisites: GERL 101

Credit Hours: 3, Lecture Hours: 144, Practical Hours: 0

### **GERL 201: German III**

Can understand the main points if no dialect is used and if it concerns familiar things about work, school, spare time etc. Can master most situations which one encounters on journeys in a German speaking area. Can express oneself simply and coherently about familiar topics and areas of personal interest. Can report experiences and events, describe dreams, hopes and goals and give short reasons or explanations about plans and opinions.

Prerequisites: GERL 102

Credit Hours: 3, Lecture Hours: 96, Practical Hours: 0

### **GERL 202: German IV**

Can understand the main contents of complex texts, as well as concrete and abstract topics; even discussions between specialists in his/ her own special field. Can communicate spontaneously and fluidly a normal discussion with native speakers, without larger effort on both sides. Can express oneself clearly and in detail in a broad spectrum of topics, describe a point of view to a current question and indicate the pro and cons of different possibilities.

Prerequisites: GERL 201

Credit Hours: 3, Lecture Hours: 96, Practical Hours: 0

### **GERL 301: German V**

Can understand and also seize implicit meanings of a broad spectrum of demanding, longer texts. Can express oneself spontaneously and fluidly, recognizing words without having to search for words frequently. Can use the language effectively and flexibly in social and vocational life or in training and study. Can express oneself clearly, structured and detailed, to complex subjects and use appropriate different means for linkage of texts.

Prerequisites: GERL 202

Credit Hours: 3, Lecture Hours: 96, Practical Hours: 0

### **ENE 211: Electrical circuits I**

Overview: SI units, voltage and current; Ohm's and Kirchhoff's Laws, circuits with dependent sources; simple resistive circuits: series, parallel and delta to wye; Techniques of circuit analysis: nodal and mesh analyses, source transformation, Thevenin and Norton equivalents; Amplifiers; Inductance, capacitance and mutual inductance; Natural and step responses of RL and RC circuits; Natural and step response of series and parallel RLC circuits; Sinusoidal steady state analysis.

Prerequisites: PHYS 104

Credit Hours: 3, Lecture Hours: 48, Practical Hours: 0

### **ENE 212: Electrical circuits II**

Calculating average and reactive power, power in parallel loads, maximum power transfer. Analysis of 3-phase circuits: calculating wattmeter readings in 3-phase circuits. Introduction to Laplace Transform: poles and zeros, initial- and final value theorems. The Laplace Transform in circuit analysis. Active filter circuits. Fourier series. The Fourier Transform. Two-port circuits.

Prerequisites: ENE 211

Credit Hours: 3, Lecture Hours: 48, Practical Hours: 0

**ENE 213: Electrical Circuits Lab**

Resistive circuits, Potentiometers, Superposition, Thevenin's theorem and maximum power transfer, RLC current and voltage characteristics, Frequency response of RL, RC and RLC circuits, Series and parallel resonant circuits, Amplifiers.

Prerequisites: ENE 211

Credit Hours: 1, Lecture Hours:0, Lab Hours: 48

**ECE 241: Electronics 1**

Introduction to (semiconductor) electronic devices. Semiconductor p-n junction, the transistor. Analysis and synthesis of linear and nonlinear electronic circuits containing diodes and transistors. Elementary analog circuit analysis. Fundamentals of transistors and voltage amplification. Characterization of MOS transistors for circuit simulation. Common-source amplifiers, MOSFET source-follower buffer stage, differential amplifier stage, and MOSFET current sources. Operational amplifiers. Development of a Basic CMOS Operational amplifier.

Prerequisites: ENE 211

Credit Hours: 4, Lecture Hours: 48, Practical Hours: 48

**CME 331: Electromagnetics 1**

Review of Vector analysis and calculus, static electric and magnetic fields, capacitance and inductance. Maxwell's equations solutions, reflection and refraction of plane waves in dielectric and conducting media, transmission lines; transients and frequency domain solutions in loss and lossless lines, Smith chart and its applications, parallel plate and rectangular waveguides.

Prerequisites: MATH 203, MATH 205

Credit Hours: 3, Lecture Hours: 48, Practical Hours: 0

**ECE 343: Digital Electronics**

Digital electronic topics include determining the logic voltage levels, speed and power of Bipolar Junction Transistor, BJT and Field Effect Transistor, FET logic circuits and latching circuits. Also covered will be analysis of BJT and FET ROM and RAM cells. Analog topics include input resistance, output resistance and voltage and current gain of single transistor amplifiers. Cascading and coupling of multiple transistors producing differential circuits, constant current sources and high gain amplifiers will also be discussed. The course will conclude with a discussion of feedback and stability of feedback amplifiers.

Prerequisites: ECE 241

Credit Hours: 4, Lecture Hours: 48, Practical Hours: 48

**PHYS 103: Physics I (Mechanics)**

Physics and measurement. Motion in one dimension. Vectors . Motion in two dimensions. Force and motion. Kinetic energy and work. Potential energy and conservation of energy. Linear momentum and collisions. Rotation. Rolling and angular momentum.

Prerequisite: None

Credit Hours: 3, Lecture Hours: 48, Practical Hours: 0

**PHYS 104: Physics II (Electricity and Magnetism)**

Electric Fields. Gauss's Law. Electric Potential. Capacitance and Dielectrics. Current and Resistance. Direct Current Circuits. Magnetic Fields. Sources of Magnetic Field. Faraday's Law.

Prerequisite: PHYS 103

Credit Hours: 3, Lecture Hours: 48, Practical Hours: 0

**MATH 101: Calculus I**

This course introduces the student to the calculus of single-valued functions. Topics include: limits, continuity, rates of change, rules for differentiating, differentials and local linear approximations, maxima and minima problems, L'Hôpital's rule, related rates, logarithmic and implicit differentiation, inverse trigonometric and hyperbolic functions, Rolle's theorem, the mean-value theorem, and applications of derivatives and integrals.

Prerequisite: None

Credit Hours: 3, Lecture Hours: 48, Practical Hours: 0

### **MATH 102: Calculus II**

This is a course in multivariate calculus as a continuation of Calculus I. The course focuses on power series, polar coordinates and polar functions, sequences and infinite series, vectors, functions of several variables and their limits, partial differentiation and their applications. The course views multiple integrals: double and triple, line integrals, surface integrals, Green's theorem, Gauss's divergence theorem, and Stoke's theorem.

Prerequisite: MATH 101

Credit Hours: 3, Lecture Hours: 48, Practical Hours: 0

### **MATH 203: Applied Math for Engineers**

Vector analysis in Cartesian coordinates. General Curvilinear Coordinates, Vector calculus in general curvilinear coordinates with emphasis on Spherical and Cylindrical coordinates, transformations between different coordinate systems, vector differentiation. Matrices and linear equations; Matrices and Linear Operators; Determinants, Eigenvalues and eigenvectors. Complex Numbers and Complex Variables; Representation of complex numbers, Powers and roots of complex numbers, Functions of a complex variable. Review of Infinite Series; Infinite series of constant terms, Convergence tests, Power series and radius of convergence, Taylor, and Maclaurin series and Fourier series.

Prerequisites: MATH 102

Credit Hours: 3, Lecture Hours: 48, Practical Hours: 0

### **MATH 205: Differential Equations**

Ordinary differential equations; Sturm-Liouville theory, properties of Special Functions, Solution methods including Laplace transform, and Fourier transform. Eigenvalue problems and expansions in orthogonal functions. Partial differential equation: classification, separation of variables, solution by series and transform methods. Models in Applied Mathematics; Applications to illustrate typical problems and methods of applied mathematics in solid and fluid mechanics, fields of physics, deformation and vibration, wave phenomena, diffusion phenomena, heat conduction, chemical and nuclear reactors, and biological processes.

Prerequisites: MATH 102

Credit Hours: 3, Lecture Hours: 48, Practical Hours: 0

### **ECE 315: Random variables and stochastic processes**

Probability principles and set theory: set definitions, set operations, probability introduced through sets and relative frequency, joint and conditional probability, independent events, combined experiments, Bernoulli trials. Random variables (Univariate and Multivariate): distribution and density functions, relation between distribution and density functions, the Gaussian random variable, other distribution and density examples (binomial / Poisson / uniform / exponential / Rayleigh), conditional distribution and density functions. Operations on random variables: expectation, moments, functions that give moments, transformations of a random variable. Distribution and density of a sum of random variables, central limit theorem. Random processes: temporal characteristics and spectral characteristic. Concept of stationarity and ergodicity. Correlation function. Power spectrum density. Response of linear systems to random signals.

Prerequisites: MATH 102

Credit Hours: 3, Lecture Hours: 48, Practical Hours: 0

### **IE 121: Engineering Workshops**

General safety, materials and their classifications, measuring devices and their accuracy, basic household plumbing and electricity, fits and tolerances, theoretical background for the practical exercises including fitting, forging, carpentry, casting, welding, mechanical saws, shearers, drills, lathes, milling machines, shapers and grinders.

Prerequisite: None

Credit Hours: 1, Lecture Hours: 0, Practical Hours: 48

### **CS113: Computing Fundamentals**

Basic computer skill; Programming concepts; algorithms: data types, arithmetic, logical, relational, Boolean, and assignment operators, simple input and output statements; programming control structures; data structures: single and multidimensional arrays; character strings; functions; pointers; file structures and representation; 3-hours lab session every week to enhance hands-on experience on topics that are theoretically covered in the course using Gnu C compiler on a Solaris/Sun environment.

In the last 2 weeks students implement a course project that combines and covers the course topics in one application. The project is carried out during lecture and lab times as well as at home.

Prerequisites: None

Credit Hours: 4, Lecture Hours: 48, Lab Hours: 48

### **CS 201: Discrete Structures**

Fundamental structures: Functions (surjections, injections, inverses, composition); relations (reflexivity, symmetry, transitivity, equivalence relations); sets (Venn diagrams, complements, Cartesian products, power sets); pigeonhole principle; cardinality and countability. Basic logic: Propositional logic; logical connectives; truth tables; normal forms validity; predicate logic; limitations of predicate logic; universal and existential quantification; modus ponens and modus tollens. Proof techniques: Notions of implication, converse, inverse, contrapositive, negation, and contradiction; direct proofs; proof by counterexample; proof by contraposition; proof by contradiction; mathematical induction; strong induction; recursive mathematical definitions; well orderings Basics of counting: Counting arguments; pigeonhole principle; permutations and combinations; recurrence relations. Discrete probability: Finite probability spaces; conditional probability, independence Bayes' rule; random events; random integer variables; mathematical expectation

Prerequisites: MATH 101

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CS 214: Object-Oriented Programming**

Object Oriented Programming concepts; Classes, objects and data abstraction, Constructors and destructors; Object-oriented design; encapsulation and information hiding; abstraction and modularization, coupling and cohesion, sample design patterns. inheritance; class and type hierarchies, polymorphism, Abstract classes, Interfaces; Packages; Collection classes, Generics, streams and files, exception handling; unit testing and debugging, Application Programming Interfaces, Javadoc, 3-hours lab session every week to enhance hands-on experience on topics that are theoretically covered in the course using the Java compiler on a Solaris/Sun environment.

Prerequisites: CS 116, CS 1160,

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CS 2140: Object-Oriented Programming Lab**

Lab session every week to enhance hands-on experience on topics that are theoretically covered in the course: Object Oriented Programming concepts; Classes, objects and data abstraction, Constructors and destructors; Object-oriented design; encapsulation and information hiding; abstraction and modularization, coupling and cohesion, sample design patterns. Inheritance; class and type hierarchies, polymorphism, Abstract classes, Interfaces; Packages; Collection classes, Generics, streams and files, exception handling; unit testing and debugging, Application Programming Interfaces, Javadoc.

Co-requisite: CS214

Credit Hours: 1, Lecture Hours: 0, Lab Hours: 48

### **CS 222: Theory of Algorithms**

Complexity bounds and asymptotic analysis: standard complexity classes; Empirical measurements of performance; Time and space tradeoffs in algorithms; analysis of algorithms. Algorithms: recursion; recursive algorithms; divide-and-conquer strategies; backtracking; design of algorithms; sorting algorithms including heapsort, merge sort and quicksort, automata and string matching. Prerequisites: CS 116, CS 1160, CS 201

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CS 223: Data Structures**

Lists, stacks and queues; hash tables; binary search trees; balanced trees, B-Trees, graphs; depth- and breadth-first traversals; shortest-path algorithms; transitive closure; minimum spanning tree; topological sort. implementation strategies for data structures; strategies for choosing the right data structure; 3-hours lab session every week allows for implementing and using sample data structures and algorithms discussed during the course using Gnu C compiler.

Prerequisites: CS 116, CS 1160, CS 201

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CS 342: Software Engineering**

The product and the process, Software project management: Basic concepts, Software process and project metrics, Software project Planning, Risk management, Project scheduling and tracking, Quality assurance, Configuration management; Classical approaches: Waterfall and Spiral models; Object-oriented approach; Unified Modeling Language (UML); Concepts and notations of object-oriented analysis: Base concepts; Static concepts; Dynamic concepts; Object-oriented analysis: Analytical process; Analysis patterns; Static model; Dynamic model; Design notations and diagram; Design patterns. Course project that covers hands on experience on Computer Aided Software Engineering (CASE) tools such as Rational Rose and Course Team Projects.

Prerequisites: CS 214

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **ME 343 Automatic Control Systems:**

Modeling of electrical, pneumatic, hydraulic and mechanical systems, Transfer functions, block diagrams, and signal flow graph. Time domain analysis, test signals, transient response, steady state error and stability. Root locus, bode plots, PID control, phase-lead, phase lag. Software application such as Matlab and Simulink.

Prerequisites: MATH 203

Credit Hours: 4, Lecture Hours: 48, Lab Hours: 48

### **CS 362: Database Management Systems**

DBMS Architecture, Storage Hierarchy, Indexes, Entity-relationship (E-R) modeling, The relational model, Relational Query Language (SQL), Query processing and optimization, Creation and manipulation of databases; Indices and views; Access rights management; Programming in SQL; Transaction Processing (Transactional properties, Concurrency control, Locking, and Crash recovery); Data dictionaries; Required software tools: A main-stream commercial DBMS such as MS SQL, Oracle; 3-hours lab covers hands on experience with design and implementing databases.

Prerequisite: CS 223

Credit Hours: 3, Lecture Hours: 32, Lab Hours: 32

### **CS 3610: Database Management Systems Lab**

Lab covers hands on experience with course topics: DBMS Architecture, Storage Hierarchy, Indexes, Entity-relationship (E-R) modeling, The relational model, Relational Query Language (SQL), Query processing and optimization, Creation and manipulation of databases; Indices and views; Access rights management; Programming in SQL; Transaction Processing (Transactional properties, Concurrency control, Locking, and Crash recovery); Data dictionaries; Required software tools: A main-stream commercial DBMS such as MS SQL, Oracle;

Co-requisite: CS361

Credit Hours: 1, Lecture Hours: 0, Lab Hours: 48

### **CS 416: Systems Programming**

System-level UNIX API's: Process manipulation; IO operations; Use of OS functionality; System-level programming in C; Shell programming; Unix system services: file system, process and thread management, inter-process communication: pipes, shared memory, and message queues, semaphores; Network programming, and synchronization; Microsoft Windows and UNIX TCP and UDP Communications; Connection-Oriented Client-Server Architecture; Remote procedure calls and COM overview.

Prerequisites: CS223

Credit Hours: 3, Lecture Hours: 32, Lab Hours: 32

### **CS 253: Component-Based Computing and Web Applications Development**

Component fundamentals; Interfaces; Object lifecycle services; Object brokers; Marshalling; Mobile components; Architecture of component-based systems; Component-oriented design; Event handling: detection, notification, and response; Middleware: object-oriented paradigm within middleware, Object request brokers, Transaction processing monitors, Workflow systems; Design patterns and components; Creational, structural and behavioral patterns; Component technologies such as J2EE and .NET, design, distribute, and re-use of software; Java Server Pages; Java Servlets, Enterprise Java Beans (EJB) – Session versus Entity beans, MVC-Struts design framework; 3-hours lab session every week to enhance hands-on experience on topics that are theoretically covered in the course using Java and Gnu C/C++ compilers.

Prerequisites: CS 214, CS 2140

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0

### **CS 2530: Component-Based Computing and Web Applications Development Lab**

Lab session every week to enhance hands-on experience on topics that are theoretically covered in the course: Component fundamentals; Interfaces; Object lifecycle services; Object brokers; Marshalling; Mobile components; Architecture of component-based systems; Component-oriented design; Event handling: detection, notification, and response; Middleware: object-oriented paradigm within middleware, Object request brokers, Transaction processing monitors, Workflow systems; Design patterns and components; Creational, structural and behavioral patterns; Component

technologies such as J2EE and .NET, design, distribute, and re-use of software; Java Server Pages; Java Servlets, Enterprise Java Beans (EJB) – Session versus Entity beans, MVCStruts design framework;

Co-requisite: CS 253

Credit Hours: 1, Lecture Hours: 0, Lab Hours: 48

### **CS 479: Mobile Computing**

An introduction to mobile computing with a strong emphasis on application development for the Android operating system. Topics will include Introduction to Android IDE, Layout & Activity, Preference and Service Menu, Thread (message), Thread (progress, post, broadcast, & Intent filter), Notification, Dynamic layouts, TTS, and clocks SQLite. This course will cover mobile phone programming components like UI programming, data management, localization, and programming sensors like the accelerometer and compass, and mobile OS services. The course will focus on the Android platform and how to use cloud services in applications. Android tablets will also be given.

Prerequisites: CS 222, CS 223, CE 201.

Credit Hours: 3, Lecture Hours: 48, Lab Hours: 0
