

الجامعة الألمانية الأردنية
German Jordanian University

School of Architecture and Built Environment

Department of

Architecture and Interior Architecture

Study Plan

**Bachelor of Science Program in
Architecture – Interior Architecture Stream**

2012

Bachelor of Science Program in Architecture

Program Emphasis

The B.Sc. Program in Architecture offered by the German Jordanian University provides a set of core courses allowing the student to study more than one deepening area with emphasis on the following streams:

- Architecture
- Interior Architecture

The core courses will allow for offering other streams in the future such as spatial planning, urban design, landscape architecture, etc.

Program Objectives

The B.Sc. Program in Architecture aims at acquainting students with creative problem solving and artistic sensitivity abilities through:

1. Providing students with a comprehensive coursework in the visual, functional, socio-economic, technical, theoretical aspects.
2. Developing students' visual, written, and oral communication skills in the traditional as well as the contemporary sense.
3. Enhancing students' creative use of advanced computer applications and software packages related to contemporary areas of knowledge.
4. Enhancing students' awareness about and sensitivity to socio-economic responsibilities as well as sensitivity to sustainable environments and interventions through integrating intensive fieldwork and site visits locally, regionally, and internationally.
5. Strengthening students' understanding of the technical and technological issues in relation to architectural and interior architecture design problems.
6. Emphasizing coordination among all design specialties by integrating and coordinating different coursework.
7. Motivating students to realize the expectations and opportunities of the profession by gaining a realistic perspective on career interests and aptitudes through integrating education and industry.
8. Equipping students with professionalism through contact with practice while still at GJU, by getting them involved in internships with local, regional, and international firms, institutions, and corporations as part of the study plan. Graduates are expected to be highly employable and to secure some of the best starting salaries in Jordan and the region.
9. Emphasizing students' management skills through design projects focusing on organizations, teamwork, and networking.
10. Building leadership and individuality by presenting the teaching-learning experience as an interactive learning environment.

11. Enhancing students' awareness about and sensitivity to the benefits of research and innovation.

Learning Outcomes

A. Key knowledge

The B.Sc. Program in Architecture ensures that the graduates will be able to evaluate, design, and provide architecture, interior architecture, and urban design projects of different scales, giving attention to space, construction, function, and visual considerations.

Assessments

Student achievement of this learning outcome is assessed:

1. [Directly] by student accumulative design courses scores and samples of students' portfolios that reflect students' overall work in their undergraduate years.
2. [Indirectly] by program review data, job placement rates, and senior surveys.

B. Abilities and Skills

The B.Sc. Program in Architecture ensures that each graduate processes the abilities and skills illustrated below:

“Understanding” means the assimilation and comprehension of information without the necessarily being able to see its full implication.

“Ability” means the skill in using specific information to accomplish a task, in correctly selecting the appropriate information, and applying it to the solution of a specific problem.

1. **Speaking and Writing Skills:** Ability to read, write listen and speak effectively.
2. **Critical Thinking Skills:** Ability to raise clear and precise questions, use abstract ideas to interpret information, consider diverse points of view, reach well-reasoned conclusions, and test them against relevant criteria and standards.
3. **Graphic Skills:** Ability to use appropriate representational media, including freehand drawing and computer technology, to convey essential formal elements at each stage of the programming and design process.
4. **Research Skills:** Ability to gather, assess, record, and apply relevant information in the coursework.
5. **Formal Ordering Systems:** Understanding of the fundamentals of visual perception and the principles and systems of order that inform two- and three-dimensional design, and composition.
6. **Basic Skills:** Ability to use the basic principles in architecture.
7. **Collaborative Skills:** Ability to recognize the varied talent found in interdisciplinary design project teams in professional practice and work in collaboration with other students as members of a design team.

8. **International Traditions:** Understanding of the international traditions in architecture and the built environment, and other cultural factors that have shaped and sustained them.
9. **National and Regional Traditions:** Understanding of the national traditions in architecture and the built environment.
10. **Human Behavior and Human Diversity:** Understanding of the theories and methods of inquiry that seek to clarify the relationship between human behavior and the built environment.
11. **Visualization:** Ability to use the visualization tools in an architectural design project.
12. **Technical Tools:** Ability to use the technical tools in an architectural design project.
13. **Client Role in Design:** Understanding of the responsibility of the architect to elicit, understand, and resolve the needs of the client, owner, and user.
14. **Comprehensive and Integrated Design:** Ability to produce a comprehensive and integrated architectural design project.

Assessments

Student achievement of this learning outcome is assessed:

1. [Directly] by reviewing samples of student work (i.e., essays, examinations, analysis projects).
2. [Indirectly] by employer surveys.

The graduates of the Department of Architecture and Interior Architecture will be able to express various traditional and technological architectural drawing and visual skills.

Assessments

Student achievement of this learning outcome is assessed:

1. [Directly] by reviewing samples of student work (i.e., computer models and freehand drawings and sketches).
2. [Indirectly] by employer surveys.

C. Values

The graduates of the Department of Architecture and Interior Architecture will be able to assess their own strengths and weaknesses and adjust future performance in light of self-assessments.

Assessments

Student achievement of this learning outcome is assessed:

1. [Directly] by evaluation of teaching staff by the students themselves.
2. [Indirectly] by student self-assessments and by rates of students' acceptance into leading graduate programs.

**Curriculum of Bachelor of Science Degree in Architecture
Interior Architecture Stream**

Classification	Credit Hours		
	Compulsory	Elective	Total
University Requirements	24	6	30
School Requirements	28	6	34
Program Requirements	72	0	72
Stream Requirements	22	29	51
Total	146	41	187

1. University Requirements (30 Credit Hours):

1.1. Compulsory (24 Credit Hours):

Course No.	Course Title	Cr. Hrs.	Lecture	Lab.	Prerequisite
ARB99	Arabic 99*	0	0	3	-
ARB100	Arabic *	3	3	0	ARB 99
ENGL98	English I*	0	0	3	-
ENGL99	English II*	0	0	3	ENGL98
ENGL101	English III*	1	0	3	ENGL99
ENGL102	English IV*	1	0	3	ENGL101
ENGL201	English V*	2	0	3	ENGL102
ENGL202	English VI*	2	0	3	ENGL201
GERL101	German I	3	0	9	-
GERL102	German II	3	0	9	GERL 101
GERL201	German III	3	0	6	GERL 102
NE101	National Education	3	3	0	-
MILS 100	Military Sciences	3	3	0	-
	Total	24			

* Student's score on the Placement Test will decide the course level to start from.

1.2. Elective (6 Credit Hours) to be chosen from:

Course No.	Course Title	Cr. Hrs.	Lecture	Lab.	Prerequisite
DES 101	Arts' Appreciation	3	3	0	-
SFTS101	Soft Skills	3	3	0	-
IC101	Intercultural Communications	3	3	0	-
SE 301	Social Entrepreneurship and Enterprises	3	3	0	-
EI 101	Leadership and Emotional Inelegance	3	3	0	-
BE302	Business Entrepreneurship	3	3	0	-
Total Taken		6			

2. School Requirements (34 Credit Hours):

2.1. Compulsory Requirements (28 Credit Hours):

Course No.	Course Title	Cr. hrs.	Lecture	Studio	Prerequisite
ARC 111	Fundamentals of Design I	4	2	4	-
ARC 112	Fundamentals of Design II	4	2	4	ARC 111
ARC 131	Technical Graphics A	3	0	6	-
ARC 132	Technical Graphics B	3	0	6	ARC 131
DES 130	Freehand Sketching I	2	0	4	-
DES 135	Freehand Sketching II	2	0	4	DES 130
SABE 231	Computing Fundamentals for Architects and Designers	4	3	3	ARC 232
GERL202	German IV	3	0	6	GERL 201
GERL301	German V	3	0	9	GERL 202
Total		28			

2.2. Elective Requirements (6 Credit Hours):

Course No.	Course Title	Cr. hrs.	Lecture	Studio	Prerequisite
Department of Architecture and Interior Architecture:					
AC 227	Comparative History of Architecture	3	3	0	-
AC 228	Architecture in the Islamic Context	3	3	0	AC 227
Department of Design and Visual Communication:					
AC 225	Comparative History of Arts	3	3	0	-
AC 226	Visual Arts in the Islamic Context	3	3	0	AC 225
Total Taken		6			

3. Program Requirements (72 Credit Hours):

Course No.	Course Title	Cr. Hrs.	Lecture	Studio	Prerequisite
General:					
ARCH 140	Understanding the Built Environment	3	3	0	-
ARC 211	Architectural Design: Methods and Typologies	5	1	8	ARC 112
ARCH 221	Modern Foundations of Architecture	3	3	0	AC 227
ARC 231	Computer Visualizations I	2	0	6	ARC 131
ARC 232	Computer Visualizations II	2	0	6	ARC 231
ARCH 261	Structural Systems I	3	3	0	ARCH 150
ARCH 262	Utility Planning and Design I	3	3	0	ARCH 150
ARCH 323	Contemporary Architecture	2	2	0	ARCH 221
ARCH 341	Landscape Architecture	3	2	2	ARC 211
ARCH 350	Local Internship	0	-	-	3 rd Year
ARCH 353	Land Surveying	2	1	3	ARC 131
ARCH 362	Utility Planning and Design II	3	3	0	ARCH 262
ARCH 421	Excursion: International Architecture	0	-	-	4 th . Year
ARCH 459	International Internship	12	-	-	4 th . Year
ARCH 593	Graduation Project I / Interior Architecture	1	1	0	5 th Year
ARCH 594	Graduation Project II/ Interior Architecture	6	0	12	ARCH 593
AC 323	Heritage Conservation and Management	3	2	2	AC 227
GERL302	German VI	3	-	6	GERL301

DES136	Rendering and Presentation Techniques	2	1	2	ARC131 - Technical Graphic A
Pure Sciences and Supporting Fields:					
MATH 101	Calculus I	3	3	0	-
ARCH 150	Physics for Architects	3	3	0	-
ARCH 354	Project Management and Site Organization I	3	3	0	ARC 211
ARCH 458	Contracts, Specifications and Quantity Surveying	3	3	0	ARCH 354
	Total	72			

4. Interior Architecture Stream Requirements (51 Credit Hours):

4.1. Interior Architecture Stream Compulsory Requirements (22 Credit Hours):

Course No.	Course Title	Cr. hrs.	Lecture	Studio	Prerequisite
ARCH 255	Interior Construction Works I	3	2	2	ARC 131
ARCH 355	Interior Construction Works II	3	2	2	ARCH 255
IARC 355	Interior Working Designs	3	2	2	ARCH 355
ARCH 315	Furniture Design	3	2	2	ARC 211
IARC 316	Color, Light, and Space	3	2	3	ARC 211
ARCH 363	Lighting Design	2	2	0	3 rd Year
ARC 441	Adaptive Re-Use of Buildings and Sites	5	1	8	3 rd Year
Total		22			

4.2. Interior Architecture Stream Elective Requirements (29 Credit Hours):

4.2.1.a. Project Electives (5 Credit Hours) to be chosen from the following list:

Course No.	Course Title	Cr. Hrs.	Lecture	Studio	Prerequisite
IARC 213	Space Planning for Temporary Uses	5	1	8	ARC 211
IARC 214	Retail Design Studio	5	1	8	ARC 211
IARC 215	Shopfront and Display Design	5	1	8	ARC 211
Total Taken		5			

4.2.1.b. Project Electives (15 Credit Hours) to be taken from the following list:

Course No.	Course Title	Cr. Hrs.	Lecture	Studio	Prerequisite
IARC 311	Domestic Environments Design Studio	5	1	8	ARC 211
IARC 312	Learning Environments Design Studio	5	1	8	ARC 211
IARC 313	Workplace Design Studio	5	1	8	ARC 211
IARC 314	Cultural and Civic Environments Design Studio	5	1	8	ARC 211
IARC 315	Theatre Set Design	5	1	8	ARC 211
IARC 318	Site-Specific Furniture Design	5	1	8	ARC 211
IARC 317	Core and Shell Design	5	1	8	ARC 211
IARC 371	Sustainable Environments Design Studio	5	1	8	ARC 211
IARC 411	Healthcare Design Studio	5	1	8	ARC 211
IARC 412	Hospitality Design Studio	5	1	8	ARC 211
IARC 413	Museum and Exhibition Design	5	1	8	ARC 211
IARC 414	Advanced Interior Design Studio	5	1	8	4 th Year
Total Taken		15			

4.2.2 Theory and Technical Electives (9 Credit Hours) to be taken from:

Course No.	Course Title	Cr. hrs.	Lecture	Studio	Prerequisite
ARCH 402	Special Topics in Interior Architecture I	3			4 th Year
ARCH 404	Special Topics in Interior Architecture II	2			4 th Year
ARCH 406	Special Topics in Interior Architecture III	1			4 th Year
ARCH 422	Contemporary Issues in Interior Architecture	3	3	0	4 th Year
ARCH 451	Design and Build	3	2	2	4 th Year

ARC 453	Building and Site Documentation	3	2	2	ARCH 353
ARCH 454	Interior Textiles, Accessories, and Resources	3	3	0	4 th Year
ARCH 554	Project Management and Site Organization II	3	3	0	4 th Year
ARCH 571	Architectural Environmental Systems	3	3	0	ARCH 362
DES 133	Calligraphy and Ornaments	3	2	2	ARC 111
DES 152	Model-Making Techniques	2	1	2	ARC 111
DES 253	Workshop Technology	2	1	2	ARC 131
DES 250	Photography Studio	2	1	2	DES 151
	Total Taken	9			

Course Code:

The digits have the following representation:

The left digit represents the level of the course

The middle digit represents the specialized field of knowledge of the course:

- 0. Special Topics
- 1. Projects
- 2. History, Theory, and Society
- 3. Communication Skills and Techniques
- 4. Built Environment
- 5. Building Sciences and Technology
- 6. Engineering Systems
- 7. Environment
- 9. Graduation Project

The right digit represents the sequence of the course within the field.

Course Description
Bachelor of Science Degree in Architecture
Interior Architecture Stream

Field 0: Special Topics

ARCH 402 Special Topics in Interior Architecture, 3 Crs.

This course allows specialized or in-depth study of a subject supplementing interior architecture. Student interest and instructor expertise help determine the topic, to be announced in the classroom.

ARCH 404 Special Topics in Interior Architecture II, 2 Crs.

This course allows specialized or in-depth study of a subject supplementing interior architecture. Student interest and instructor expertise help determine the topic, to be announced in the classroom.

ARCH 406 Special Topics in Interior Architecture III, 1 Crs.

This course allows specialized or in-depth study of a subject supplementing interior architecture. Student interest and instructor expertise help determine the topic, to be announced in the classroom.

Field 1: Projects

ARC 111 Fundamentals of Design I, 4 Crs.

A project-based course; introduction to the basic principles of order using two- and three-dimensional compositions of basic design elements: point, line, and plane, addition and subtraction through intersection of these elements and the potential illusive volumes that make space shapes: circle, square, and triangle; spatial organization: symmetry and balance, unity, repetition and rhythm, transformation and datum; order: focality and centralization, radiality, linearity, and grid. The course will establish space explorations through movement and circulation. Additional emphasis will be on color theory, textures and tones. Class assignments will be based on abstract concepts while acquainting student with using different media and presentation techniques.

ARC 112 Fundamentals of Design II, 4 Crs.

A project-based course; it provides understanding to the complex nature of space forming by synthesizing its basic elements; emphasis on constructive typology and form generation; formal expression and dependence/independence of mass and space using solid and void, ratio and proportions, and numerical logic. It provides an understanding of the different spatial relationships, ordering principles, and arrangements in relation to place making and preferences. Topics that may be covered include measured drawings, small objects, 2-D and 3-D compositions of abstract and real nature, etc.

ARC 211 Architectural Design: Methods and Typologies, 5 Crs.

A project-based course; a first architectural design course, it focuses on design methods and processes which require understanding spatial analysis and its relation to programming. It builds up skills towards synthesizing spatial arrangements, relationships, and typologies using experiential expression tools of geometry, order, and structure. Students will be exposed to hypothetical and real sites. Students will be required to use self expression in order to explore their understanding of problem solving and to demonstrate their abilities to go from abstract to contextual order.

ARCH 315 Furniture Design, 3 Crs.

A project-based course; it introduces specific furniture and product design components, materials, and fittings. The course is directed towards making students able to draw, develop, and build on small scale. It draws upon historical lineage by identifying the historical trajectories relevant to furniture and product design developments through predominant civilizations and their contribution, tracing the dominant furniture paradigms and historical shifts that have occurred from prehistory up to the 21st century. Specific emphasis is placed on theoretical, ideological, and technical developments which impacted contemporary furniture.

IARC 211 Principles of Interior Design, 3 Crs.

A project-based course; it introduces the fundamental elements and principles of interior design. Students work with concepts and methods for defining and organizing space and form in the interior environment. Communication of design concepts will require variety of media and modes of presentations.

IARC 212 Space Planning for Temporary Uses, 5 Crs.

A project-based course; it focuses on space planning for temporary uses, the problem solving discipline of the interior architectural design process and its application to temporary uses such as temporary conventions, sales of merchandise, exhibitions, etc. Develops concepts to achieve design goals and apply theoretical knowledge and technical skills to design solutions. Students work on a variety of professionally relevant projects. The course will introduce the importance of client contact and interviewing, program development, and design development. Communication of design concepts will require variety of media and modes of presentations.

IARC 213 Retail Design Studio, 5 Crs.

A project-based course; it focuses on retail spaces, the problem solving discipline of the interior architectural design process and its application to department stores, shops, boutiques, and other retail and mercantile settings. Develops concepts to achieve design goals and apply theoretical knowledge and technical skills to design solutions. Students work on a variety of professionally relevant projects. The course will introduce the importance of client contact and interviewing, program development, and design development. Communication of design concepts will require variety of media and modes of presentations.

IARC 214 Shopfront and Display Design, 5 Crs.

A project-based course; it concerns the design of the front side of a store facing the street that contains display windows. Students will be introduced to shopfront components, traditional shopfronts versus the new shopfronts, interactive shopfronts, shopfronts graphics and signage. The course also concerns the design of display cabinets and units. Projects will emphasize the understanding and incorporation of different interior design entities like lighting, colour, materials, use of technology, and the issue of security. Communication of design concepts will require variety of media and modes of presentations.

IARC 311 Domestic Environments Design Studio, 4 Crs.

A project-based course; it focuses on domestic environments, the problem solving discipline of interior architectural design process and its application to single and multi-family dwellings. Develops concepts to achieve design goals and apply theoretical knowledge and technical skills to design solutions. Students work on a variety of professionally relevant projects. The course will introduce the importance of client contact and interviewing, program development, and design development. Communication of design concepts will require variety of media and modes of presentations.

IARC 312 Learning Environments Design Studio, 5 Crs.

A project-based course; it focuses on learning environments, the problem solving discipline of the interior architectural design process and its application to formal (schools) and informal (interpretive venues) learning settings. Develops concepts to achieve design goals and apply theoretical knowledge and technical skills to design solutions. Students work on a variety of professionally relevant projects. Communication of design concepts and development will require developed skills using different media and modes of presentations.

IARC 313 Workplace Design Studio, 5 Crs.

A project-based course; it focuses on workplace settings, the problem solving discipline of the interior architectural design process and its application to the many places people work. Develops concepts to achieve design goals and apply theoretical knowledge and technical skills to design solutions. Students work on a variety of professionally relevant. Communication of design concepts and development will require developed skills using different media and modes of presentations.

IARC 314 Cultural and Civic Environments Design Studio, 5 Crs.

A project-based course; it is based on practical application of interior architectural design process using various cultural and civic environments as cases to examine programming and code requirements, while focusing on human comfort. Projects will emphasize the understanding and incorporation of different interior design entities like lighting, colour, materials, use of technology, and structure. Projects will cover the various cultural and civic typologies such as theatres, libraries, religious buildings, civic centres, etc. Communication of design concepts and development will require developed skills using different media and modes of presentations.

IARC 315 Theatre Set Design, 5 Crs.

A project-based course; as set designers, students are to create the design ideas for the overall visual look of theatres. Key tasks involve studying scripts and discussing ideas with the director, communicating ideas about costume, make-up, props and lighting designers, overcoming any logistical problems, such as lighting or complex scene changes, researching the right historical, contemporary or futuristic details for production, creating effective designs within the available budget, sketching design ideas to produce a 'storyboard', showing what the sets will look like scene by scene, building and photographing scale models, estimating costs and preparing a production schedule, overseeing set building and decoration, and making any adjustments needed during rehearsals.

IARC 316 Site-Specific Furniture Design, 5 Crs.

A project-based course; through a series of studio work, lectures, presentations, assignments and fieldtrips, students examine the role of furniture within the context of its surroundings, its intended function, and its relationship to human needs and the environment. Students are to apply the gained knowledge along with appropriate tools and technology to develop and implement site/building specific furniture. Communication of design concepts and development will require developed skills using different media and modes of presentations.

IARC 317 Core and Shell Design, 5 Crs.

A project-based course; where the core and shell of a building are defined while the students will design the infills (what goes inside the core and shell). The core and shell elements are typically long-lead items. The CORE areas include the building structures (beams, columns and slabs), vertical circulation systems (staircases, ramps, and elevators), and the electromechanical ducting system. The SHELL refers to the building facade (insulated exterior walls, exterior glazing, and roofs). Projects include green building measurements in core and shell developments, core and shell renovation projects, remodeling and face-lifting of existing buildings, etc. Communication of design concepts and development will require developed skills using different media and modes of presentations.

IARC 318 Color, Light, and Space, 3 Crs.

Colour is here specifically related to space and light. Students will research and experiment colour schemes, colour effects, colour trends, psychology and physiology of colour and light and its effect on space. The course will focus on colour in residential units and its contrast as well as its aesthetics in interior spaces.

IARC 371 Sustainable Environments Design Studio, 5 Crs.

A project-based course; it examines commercial and residential interior spaces where students will create sustainable and healthy environments to live in. The course reviews case studies representing best practices in sustainable design of interiors for discussion and analysis, evaluating project success according to sustainable theories, application of LEED standards, and life-cycle assessments. Communication of design concepts and

development will require developed skills using different media and modes of presentations.

IARC 411 Healthcare Design Studio, 5 Crs.

A project-based course; it focuses on healthcare spaces, the problem solving discipline of the interior architectural design process and its application to hospitals, clinics, assisted living communities, and related healthcare facilities. Develops concepts to achieve design goals and apply theoretical knowledge and technical skills to design solutions. Students work on a variety of professionally relevant projects. Communication of design concepts and development will require developed skills using different media and modes of presentations.

IARC 412 Hospitality Design Studio, 5 Crs.

A project-based course; it focuses on hospitality spaces, the problem solving discipline of the interior architectural design process and its application to hotel, resort, restaurant, entertainment, and related interior spaces. Develops concepts to achieve design goals and apply theoretical knowledge and technical skills to design solutions. Students work on a variety of professionally relevant projects. Communication of design concepts and development will require developed skills using different media and modes of presentations.

IARC 413 Museum and Exhibition Design, 5 Crs.

A project-based course; it will introduce an in-depth process of designing museums and exhibitions. The course will expose students to different staff positions in such building typology (museums) including curators, designers, educators, developers, conservators, preparators, collections managers, administrators and others. Communication of design concepts and development will require developed skills using different media and modes of presentations.

IARC 414 Advanced Interior Architecture Project, 5 Crs.

A project-based course; it provides advanced design skills to meet the challenges of complex interior architecture projects. An integrated single in-depth design project will be introduced in order to gain developed and focused skills in analysis, programming, concept making, specification consideration and design development. The course provides students with the freedom to select their design methods as a means of developing student individuality. Projects are oriented towards a more complex nature both spatially and detail-wise. Advanced techniques and processes of design solutions and presentations are required.

Field 2: History, Theory, and Society

ARCH 221 Modern Foundations of Architecture, 3 Crs.

This course covers modern architecture and city evolution from the mid-eighteenth century, i.e. from the Enlightenment and the Industrial Revolution to the 1960s. It focuses on comparative studies with Ottoman architecture;

the imperial colonized image of the Middle Eastern and North African (MENA) cities; independence from colonization and search for national identity through architecture and art. Emphasis is on the physical, social, political, and religious forces and their effects on the evolution of city form and architecture.

ARCH 323 Contemporary Architecture, 2 Crs.

This course introduces architecture today: current trends and experimental studios as Post-Modernity, Deconstruction, Phenomenology, Figuration, Grotesque, Un-Volumetric, Sustainability, coming back to the city, and conservation movement as notions of cultural change where architecture exceeds design. It presents contemporary schools of thoughts, criticism, and experimentation in architecture while emphasizing the physical, socio-political, and cultural forces and their impact on the evolution of architecture and city form.

ARC 421 Excursion: International Architecture, 0 Crs.

A fieldtrip-based course; includes assignments related to the developments of architecture and interior design in the world; study of selected projects covering the visual, functional, structural, and technological aspects.

ARCH 423 Contemporary Issues in Interior Architecture, 3 Crs.

In this course, students explore a variety of critical, aesthetic and practical issues relevant to the current practice of interior architectural design. The course employs readings, lectures and discussions to stimulate and refine critical thinking and practical design problem-solving abilities. Collaborative students conduct research as groups on current issues of interest and are responsible for both analysis and presentation.

Field 3: Communication Skills and Techniques

ARC 131 Technical Graphics A, 3 Crs.

A project-based course; it is based on use of instruments and equipment necessary for accurate drafting of simple geometric constructions gradually evolved into orthogonal - isometric and axonometric - projections, planes, sections and elevations.

ARC 132 Technical Graphics B, 3 Crs.

A project-based course; it is based on learning of perspective projections: one-point and two-point projections, exterior and interior; casting shades and shadows on horizontal and vertical planes; axonometric and isometric, while using different rendering techniques: pencils, colored pencils, markers, pens, and ink.

ARC 231 Computer Visualizations I, 2 Crs.

This course provides students with hands-on experience using software packages in architectural media, graphics and representation. It teaches students to use computer applications in producing two and three-dimensional drawings, presentation techniques for producing rendered, modeled and visualized architectural drawings.

ARC 232 Computer Visualizations II, 2 Crs.

This course teaches students to assess computer as a totally integrated medium in the design process starting from data collection, sketch making, design alternatives proposing, design decision making and, finally, preparing drawings for comprehensive design projects. The course emphasizes the use of computers for simulating buildings, lighting (natural and artificial), materials, and textures, and the importance of presenting these simulations in animated models.

SABE 231 Computing Fundamentals for Architects and Designers, 4 Crs.

This course brings the students in contact with the latest developments of computational design tools. Today, many designers and researchers use digital tools and scripting languages associated with them to simulate, automate, generate processes and get hand on parametric, or generative relationships in geometry, materials, systems structures, programmatic elements, visual and compositional components, enabling the rise of more complex solutions for an already complex problems. Solutions that are not reachable using design tools in a conventional matter. The course will look into the syntax of an existing scripting language, as an example, programs plug-ins, and other necessary means. It will examine different case studies and focus on the way multiple programs communicate, in order to execute and automate and idea from conceptual general level to a mature detailed high level.

Field 4: Built Environment**ARC 343 Infill Architecture, 5 Crs.**

A project-based course; it concerns the ongoing change of heritage areas and the new projects that are added either as new infill buildings in old settings or new additions on old buildings. Students will be introduced to the various approaches of designing new buildings in old settings so that they are sympathetic to their context. It also deals with methods of analysis of old settings in relation to cultural aspects, socio-economic impacts as well as market oriented trends. The course touches on psychological, behavioral, social, and cultural inputs and the perception of place identity, context, memory and meaning. Techniques and processes of design solutions and presentations should reflect the individuality of the student.

ARC 441 Adaptive Re-Use of Buildings and Sites, 5 Crs.

A project-based course; it concerns the creating new uses for heritage and contemporary buildings and sites that are no longer suitable for the purpose for which they were originally intended to, with consideration of the entire life cycle of the building and its components in regard to economics, environmental impact, and performance. It also deals with methods of analysis of heritage buildings and sites in relation to cultural aspects, socio-economic impacts as well as market oriented trends. The course reviews the

urban planning and design concepts and trends. It touches on psychological, behavioral, social, and cultural inputs and the perception of place identity, context, memory and meaning. Techniques and processes of design solutions and presentations should reflect the individuality of the student.

ARCH 140 Understanding the Built Environment, 3 Crs.

A tutorial-based course; it introduces basic multidimensional understanding of the built environment at the levels of urban, architectural, landscape, building systems and material, design process and implementation in its relation to people. It provides understanding to the complex nature of place forming by synthesizing its basic ingredients that relate to perception of place identity and meaning, reflecting people needs, uses, context, and memory. The course touches on psychological, behavioral, social, and cultural inputs using comparative analysis. It provides understanding of the different spatial typologies, order, relationships, and arrangement in relation to place making and preferences.

ARCH 341 Landscape Architecture, 3 Crs.

A project-based course; it focuses on site analysis (topographic and climatic), treatment of land surfaces and levels, planting, water, lighting outdoor spaces, and external furniture. It emphasizes types of local and regional vegetation and criteria for their choice as well as the development of landscape design in Far Eastern, European and Islamic cultures. Focus is also on client needs and interior/exterior spatial and visual relationships. Projects should include site inventory, research, and analysis; program development; concept alternatives; master planning; and details design using a combination of computer, technical, and freehand presentation techniques.

Field 4: Building Sciences and Technology

ARCH 150 Physics for Architects, 3 Crs.

A basic course for a number of programs related to structural, electrical, and mechanical engineering systems. It covers mechanics and dynamics, electrostatics and electricity, light, geometric optics, and sound; heat transfer; climatology; gases and vapor. The course is structured based on soft-numerical teaching methods where emphasis is given to morphology and behavior rather than on detailed calculations.

ARCH 255 Interior Construction Works I, 3 Crs.

The course is a study of interior construction materials and processes: nature, properties, characteristics, and capabilities, choice of interior construction materials.

ARCH 350 Local Internship, 0 Crs.

The course aligns students' educational outcomes with the requirements of skill set and professions. Students must complete 160 hours of training in approved locations in Jordan by the end of the third academic year. This includes office and field training to prepare the students for the job market in architecture and interior architecture. Emphasis is on standard business

practices and formats, as well as consolidating a body of work in a manner that best expresses student abilities and meets the expectations of the situation at hand. Special attention is given to codes of professional practice: technical, administrative and financial responsibilities of the architect in dealing with clients, colleagues, consultants and building contractors; contract negotiation; usage information; and planning and building legislations.

ARCH 353 Land Surveying, 2 Crs.

The course presents surveying principles and techniques: measurement of distances, triangulation, taping errors, corrections, differential and cross sectional leveling, compass use, measuring heights, elevations, computing angles (amplitude, azimuth), construction and topographic surveys, using traditional and advanced techniques.

ARCH 354 Project Management and Site Organization I, 3 Crs.

The course concerns the basic concepts of the professional practice in architecture. It also concerns the planning and operation of construction projects by the architect, in addition to the coordination and control of personnel, materials and machines, scheduling, estimation, pricing and analysis, purchasing cost control, and other topics. The influence of construction procedures on design processes, the common and civil laws as applied to engineering contracts.

ARCH 355 Interior Construction Works II, 3 Crs.

The course concerns the finishing materials and techniques: tiling, flooring, carpet construction and quality, plastering, wood paneling, metal grills, partitions, paints, wall and ceiling materials, and other components such as moldings, door hardware and door materials, as well as lighting fixtures, air conditioning outlets and chimneys.

ARCH 451 Design and Build, 3 Crs.

This course presents an option for students who want to design and build from their own ideas of architecture. The course starts as a three-week design project of the students' choosing, with directions from the professor with regard to scope and feasibility of construction. During this first phase, students design and produce detailed drawings of a conceived piece of architecture that they later build together. For the remaining seven weeks, the students engage in material selection and acquisition, and construction of their design. They team out to learn the construction process of buildings.

ARCH 454 Interior Textiles, Accessories, and Resources, 3 Crs.

The course introduces properties and applications for textiles, accessories and various other recourses that can be selected, specified, installed, and maintained in an interior environment. Topics include soft and hard materials for flooring, walls, ceilings, and upholstery, as well as equipment, applications, millwork, and cabinetry. Product sources and specifications are covered along with how to measure, correctly install and maintain the various materials.

ARCH 458 Contracts, Specifications and Quantity Surveying, 3 Crs.

This course concerns the preparation of feasibility studies and tender documents for architectural projects; specification writing; preparation of bills of quantities; measurement systems, cost estimating; and legal and management issues.

ARCH 459 International Internship, 12 Crs.

This course is oriented towards partnerships and co-operation programs between the University and professional firms, studios and agencies in Germany. Students will attend a six-month internship program in Germany to align their educational outcomes with the requirements of skill set and professions in Jordan and the region.

ARCH 554 Project Management and Site Organization II, 3 Crs.

The course focuses on the project management processes, organizational structure, construction project participants, organizing and leading the construction project, project delivery methods, project chronology, construction services during design, bidding and procurement, construction closeout, project planning and scheduling, project cost estimate, controlling project time, cost and quality, job site administration, principles of programming office and field works; linear planning; network planning; critical path in supervision and follow-up; pinpointing and controlling critical points; revising and updating the network through checking operations, time schedules, cost, management of workers and working systems, contractual documents, general and special conditions, and safety issues on the construction sites .

ARC 453 Building and Site Documentation, 3 Crs.

This course aims to provide the students with the skills and abilities to document buildings and sites including the physical documentation as well as the narrative stories that reflect the history, significance and meaning of a specific building or site. It is a field-project oriented using conventional and advanced technologies, different types of thematic surveys, inventories, fieldwork, and research.

IARC 355 Interior Working Designs, 3 Crs.

This course focuses on the products and legal contracts related to interior architecture, i.e., the construction documents. A wide range of skills and knowledge are required to complete the construction document. Topics include drawing types, drawing format, processes, building codes, accessibility, materials and timelines. Students develop a thorough understanding of the knowledge required, the processes undertaken, the scope of services normally provided, and the groups involved.

Field 6: Engineering Systems

ARCH 261 Structural Systems I, 3 Crs.

The course covers behavior of building structural systems; moment distribution, forces, stability, and mechanical properties of structural materials; analysis of stress, reactions, shear and bending; structural classifications:

linear, planar, volumetric; choice of structural systems: column and beam, truss and frame systems, arch and barrel vault systems; choice of construction materials: reinforced concrete and steel. The course is structured on soft-numerical teaching methods where emphasis is given to morphology and behavior rather than to detailed calculations.

ARCH 262 Utility Planning and Design I, 3 Crs.

The course introduces the operation and design of building systems for climate control, water and drainage, life safety. It also highlights the design of heating, ventilating, and air conditioning (HVAC) systems for buildings. Systems are analyzed for their effect on building form, construction cost and operating efficiency.

ARCH 362 Utility Planning and Design II, 3 Crs.

The course introduces the operation and design of building systems for electrical supply, illumination, transportation (elevators and escalators), and noise control. Systems are analyzed for their effect on building form, construction cost and operating efficiency.

ARCH 363 Lighting Design, 3 Crs.

The course introduces lighting design for interior environments. Students explore human visual perception, properties of natural and artificial light, lighting devices and controls, energy issues, and visual communication of lighting designs including applications to specific design problems.

Field 7: Environment

ARCH 571 Architectural Environmental Systems, 3 Crs.

The course provides an analysis of the physical environment with a focus on climate: the atmosphere and its related phenomena, e.g., the greenhouse effect, air pollution and acid rains; energy sources (renewable and non-renewable); environmental controls at the levels of the building, neighborhood, city and region; natural and mechanical environmental controls; sustainable ecological design: open and closed systems; the development of “hi-tech” and “eco-tech” and their introduction into architectural expression; and studies of model cases.

Field 9: Graduation Project

ARCH 591 Graduation Project I, 1 Crs.

The course is oriented towards systematic analysis of the graduation project dealing with nature of project, functional and spatial relationships, location and setting, physical and human environments, use of case studies, and provision of synthesis and alternative concepts as design solutions. The outcome will be presented in both written report and visual presentation.

ARCH 592 Graduation Project II, 6 Crs.

A project-based course continuation of ARCH 591. It deals with thesis preparation and research outcomes and synthesis, it proceeds to develop preliminary architectural design concepts, assesses alternative design approaches, development of design through systematic process of evaluation of spatial, functional, social, structural, environmental, and aesthetic aspects, and, finally, presents the complete design project. This includes the preparation of a full set of working design drawings.

Courses offered by the Department of Design and Visual Communication:

DES 130 Freehand Sketching I, 2 Crs.

This course teaches students perspectives of observation; perception of solids and voids in space; objective recording of three-dimensional form onto flat surface representing a two-dimensional visual frame; drawing in various media: pencil, ink, water color, etc; and textural and tonal qualities introduced and enhanced through freehand sketching. Students will produce sketchbooks as a device used sketch, draw and record existing events and visualize concepts.

DES 135 Freehand Sketching II, 2 Crs.

This course is a continuation of DES 130; aims to acquire methods and develop skills of sketching as a means of visualization in the design-process; to further develop acquired skills and knowledge in analytical freehand sketching; to acquire an understanding about various modes of representation within architecture and design; their specific potential and limitations in visual communication; to develop awareness about representation as symbolic form. Students will produce sketchbooks as a device used sketch, draw and record existing events and visualize concepts.

DES 133 Calligraphy and Ornaments, 3 Crs.

The course will teach development of lettering and ornaments throughout history: Arabic and Latin letters, their proportions, structure, characteristics and different styles as well as ornamentations inspired by vegetation, animals, stars, and geometry. It also studies use of ink pen and brush in the creation and execution of various lettering styles, works of calligraphy and ornaments, with a focus on esthetic quality of single forms and details. Exploring applications under contemporary communicative aspects is further included.

DES 136 Rendering and Presentation Techniques, 2 Crs.

Rendering and presentation techniques concern both the art of mastering the available means of persuasion and the study of how oral, written, and visual communication projects the intentions of individuals and groups, makes meanings, and affects audiences. The purpose of this course therefore is two-fold: to help students become more effective communicators by learning the various presentational situations and techniques; and to help them understand how various forms of communication work by learning some of the strategies of presentation techniques analysis.

DES 151 Principles of Photography, 2 Crs.

The course discusses the significance of medium photography within communication processes and the difference between human perception and photographic image, reflecting such aspects as subjectivity and objectivity. Through creative assignments that emphasize conceptual development and technical skills, students will explore the nature of two-dimensional medium photography and learn to use the creative effects of display window, aperture, exposure time, camera movement, manipulation of perspective, light and illumination. The course also includes an introduction to basic digital image manipulation, input and output strategies using digital cameras and creative camera controls. Masking techniques, paths, panoramas, photo retouching, and stereoscopic imaging are also included. The course focuses finally on proficiency in working with equipment and software combined with creativity to produce a quality portfolio.

DES 152 Model-Making Techniques, 2 Cr

A practical course covering model-making skills and techniques for theatre, film, animation, and graphic and product design. Emphasis is made on accessible techniques of building, modeling, surfacing and finishing relevant to designers in various disciplines. There is a focus on 'realism' in representation, geared more to theatre and film work. Areas covered include methods of constructing or shaping with card, plastics and foams; methods of casting; modeling with soft materials; figures; techniques of soldering and etching metals; scenic, such as plants and trees; various surface/texture treatments and paint finishes.

DES 250 Photography Studio, 2 Crs.

This advance level course emphasizes theoretical knowledge, which is needed for the development of professionalism in photography. Beside advance technical knowledge of equipment and digital image processing, students will also get to know the various principles and concepts concerning artistic expressions, design elements and graphical presentation. The knowledge will widen the students' scope for creative imaging.

DES 253 Workshop Technology, 2 Crs.

This course is concerned with product design production methods. It engages the students in building three dimensional physical models of their design, material, selection and acquisition, and construction of models using woodwork, metalwork, welding, casting, and the like. The course includes excursions to industrial design production units.

Courses offered by the Department of Architectural Conservation:**AC 223 Comparative History of Architecture, 3 Crs.**

This course presents architectural roots, contexts and settlement forms from the prehistoric beginnings to Middle Eastern and North African civilizations of the Nile Valley, Mesopotamia, Phoenicia, and Crete, and to the Classical civilizations of Greece and Rome, It also deals with Byzantine and Early Christian architecture; evolution of Western architecture and art:

Romanesque, Gothic, Renaissance, the Classic Revival in Central Europe; Students gain an appreciation of these cultures and an understanding of their historic, socio-economic, political, religious, and scientific effects on the evolution of architecture and city form.

AC 224 Architecture in the Islamic Context, 3 Crs.

This course reviews the development of architecture in the Islamic context with focus on MENA. It discusses examples of works from the Umayyad, Abbasid, Mamluk, Ottoman periods; it also discusses the role of Islamic beliefs, ideas and myths, together with the great variety of the inhabitants in the evolution of city form, and architecture. The course also reviews the contemporary attempts to achieve identity in MENA.

AC 323 Heritage Conservation and Management, 3 Crs.

This course aims to introduce students to heritage conservation and management, with emphasis on restoration, rehabilitation and adaptive use of heritage buildings and sites. Students are introduced to the theory and history of preservation movement at the international and national levels. The course covers survey techniques for documentation of buildings and sites: short-listing, assessment and categorization of monumental buildings; preparation of documents and technical reports on conventional structural systems; preparation of case studies and critical analyses of the evaluation of selected local and regional examples of documentation and conservation; and the preparation of management plans.
